Did you know?

Carbon monoxide is an odorless, tasteless, and invisible gas.

Signs of CO poisoning include headache, nausea, fatigue, vomiting, and disorientation.

Cooking and heating units that burn fuel and are not properly ventilated or that malfunction can be a source of CO in the home.

WHAT YOU NEED TO KNOW ABOUT:

**CO ALARMS**

- Install carbon monoxide alarms within 10 feet of each sleeping room or inside each sleeping room.

- Test CO alarms monthly. Replace alarms every five to seven years.

- If a CO alarm sounds, evacuate immediately and call 911 from outside your home.

- Clear snow and debris from furnace, dryer, fireplace or oven vents around your home to prevent a CO buildup.
