SPRINKLER DISCHARGE PATTERNS – TYCO® “ATTIC SPRINKLER”

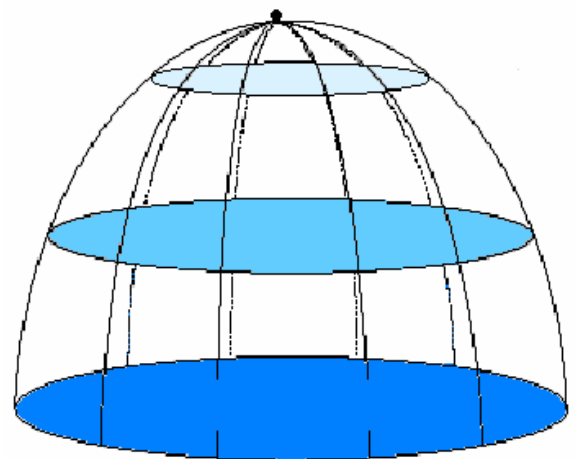

The Tyco® “Attic Sprinklers” are “Specific Application Sprinklers” designed to protect sloped attic spaces. Their unique **discharge pattern** was developed to produce a narrow but long pattern. One of their primary functions is to provide protection of the roof structure.

The figures below demonstrate the different **discharge patterns** between Tyco® attic sprinklers and standard spray sprinklers.
