

Minnesota Department of Public Safety State Fire Marshal Division

Occupant Load Determination – Salons

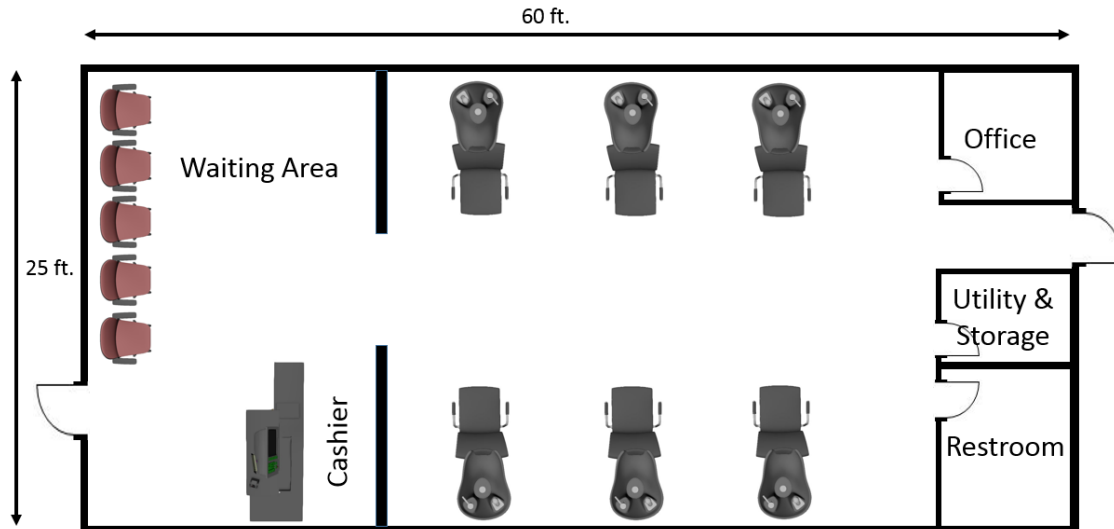

Common occupant load factors

Here are the common occupant load factors used for salons (hair, nails, etc.) from Table 1004.5 of the 2020 Minnesota State Fire Code (MSFC):

- Salons (new – on or after March 31, 2020) – 150 sq. ft. per person.
- Salons (existing – before March 31, 2020) – 100 sq. ft. per person.

Applying occupant load factors to buildings

To determine the occupant load of a space, divide the size of the entire space by the occupant load factor of Table 1004.5 (150 sq. ft. per person for new and 100 sq. ft. per person for existing). Suite-style or open floor plan salons are treated the same.

Calculations

- Salon (measure entire area used)
 - 60 ft. by 25 ft. = 1,500 sq. ft.
 - 1,500 sq. ft. divided by 100 sq. ft. per person (existing) = 15 persons.
 - 1,500 sq. ft. divided by 150 sq. ft. per person (new) = 10 persons.
